RDG.ENERGY

Combining traditional oil and natural gas production with renewable energy generation and storage is RDG's core business. We offer unique solutions for domestic, decentralized production of energy from underground resources. As a high-tech company, our work starts where our competitors stop. Our technical know-how and sustainable approach in lean operations allows us to develop even small reservoirs efficiently. With state-of-the-art technology we strive to reuse our reservoirs as sources of renewable geothermal energy after conventional production where feasible. We call this reservoir upgrading.

We currently have vacancies for

Senior Geologist (f/m)

Key Responsibilities

- Takes a lead role in delivering projects while guiding the geoscience discipline
- Oversees daily technical activities for studies and well operations, i.e. including support for evaluation during new business assessments
- Works independently to validate, interpret and integrate various geophysical, geotechnical and well data to form comprehensive assessments
- Contributes to integrated development plans and leads exploration projects
- Interprets qualitative and quantitative seismic data
- Training and mentoring of young team members

Main Qualifications

- University degree in Geoscience/Geophysics
- Minimum 15 years relevant professional industry experience
- Strong hands-on expertise in building geological models, including knowledge of seismic interpretation and exploration, and integration with dynamic modeling
- An understanding of the North/South German geological setting would be beneficial
- Operational experience in planning and operations geology
- Broad geoscience experience as input into multidisciplinary teams
- Brings creative ideas and views, technologies and workflows to RDG
- Strong interpersonal skills with ability to lead the geoscience discipline and manage projects, and to develop and mentor staff
- Excellent language skills in English. German would be an advantage

Senior Reservoir Engineer (f/m)

Key Responsibilities

- Dynamic reservoir modeling in multi-disciplinary teams
- Reservoir and field (re)development planning for oil & gas fields
- Hydrocarbon maturation planning and reserves estimates
- Initiate, propose and deliver appraisal and development drilling projects
- Support in evaluation of M&A opportunities
- Conduct technical reviews and coach young team members

Main Qualifications

- University degree in Petroleum Engineering (Masters) or equivalent
- Minimum 10 years relevant professional industry experience
- Expert level in reservoir simulation
- Strong interpersonal skills, experience in training staff
- Excellent language skills in English. German would be an advantage

For each position we offer

- Excellent development opportunities in a fast-growing E&P company in a dynamic environment with international staff
- Competitive salary as per your qualification and experience, plus fringe benefits
- Place of work: Vienna / Hannover
